DETAILED ACTION

1. Claims 1-28, 31-33, 35 are pending.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-20, drawn to a polynucleotide that comprises a sequence encoding an HIV envelope protein fused to at least one sequence encoding an HIV non-structural or capsid protein, operably linked to a heterologous promoter and a vector comprising the polynucleotide.

Group II, claim(s) 21-23, drawn to a fusion protein comprising an HIV envelope protein and at least one additional HIV protein selected from non-structural or capsid proteins.

Group III, claims 24-26, 28 and 35, drawn to a pharmaceutical composition of vector and a method of treating a patient suffering from or susceptible to a disease comprising administering a safe and effective amount of a pharmaceutical composition.

Group IV, claim 27, drawn to an intradermal delivery device comprising a pharmaceutical composition.

Group III, claim(s) 31, drawn to a process for the production of a polynucleotide comprising linking a nucleotide sequence encoding a substantially non-glycosylated HIV envelope protein and a sequence encoding an HIV non-structural or capsid protein to a heterologous promoter sequence.

Group IV, claim(s) 32-33, drawn to polynucleotide that comprises a sequence encoding an HIV Tat protein in a fusion with at least two HIV antigens.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Art Unit: 1632

The technical feature linking the inventions of Groups I-IV is a polynucleotide encoding a fusion protein comprising at least one sequence encoding an HIV non-structural or capsid protein operably linked to a heterologous promoter. However, Woodberry et al, (Journal of Virology, 73(7): 5320-5325, 1999) also teaches a polynucleotide encoding an HIV envelope protein fused to at least one sequence encoding an HIV non-structural or capsid protein operably linked to a heterologous promoter (p 5320-5325).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
